

Logbook Policy V3

- 1) Maintaining a logbook is an important part of the inventing process and therefore a logbook will be a required part of the judging process.
- 2) The logbook is a written record of the process of creating the invention and should be written as the inventing is going on and not compiled after the process is complete.
- 3) The logbook should address each of the Stages of Invention.
 - i) Identifying the Problem
 - ii) Understanding the Goal
 - iii) Ideating a Solution
 - iv) Designing a Solution
 - v) Building a Device
 - vi) Testing & Evaluating the Device
 - vii) Communicating the Results
- 4) The logbook can contain more information and sections, but as a minimum it should contain sections for each of the Stages of Invention.
- 5) The logbook does NOT have to be in any particular style or format. The information can be entered into a pre-made template or it can be an initially blank notebook that is created during the invention process.
- 6) Attached is a copy of the STEMIE logbook template, which can be used as a model. The purpose of the template is to guide the student through the steps in each of the Stages of Invention.
- 7) There are some extra sections in this template, which are in addition to the Stages of Invention and these extra sections can be deleted, if wanted.
- 8) Affiliates are free to add their own logos to the template, but they should not remove the STEMIE logo. Affiliates are also free to add color, pictures and formatting changes to the template, if they want, but the Stages of Invention should remain the same.
- 9) The logbook is a living document that reflects the actual work of the inventor as it occurs. It does NOT have to be perfectly written, drawn and spelled. Sloppiness and errors should be avoided, but they are not fatal flaws either.
- 10) This STEMIE logbook template is a prototype and STEMIE would love to get feedback about its use and comments concerning improvements of any kind.
